

FullDeskLeads

— RECRUIT & CONQUER —

Brand Guidelines

VERSION 2.0 / SEPTEMBER 2026 / FULLDESKLEADS.COM

THE BRAND

Full Desk Leads has no symbol. The name is the mark. Three words closed into one, capitals raised so the eye still reads each of them, and a motto ruled in beneath like a line on an engraved instrument.

POSITIONING

The premier lead source to scale your recruiting business. Built for firms that win on the volume of qualified hiring-manager conversations.

PERSONALITY

Premium. Prestigious. Simple. Modern. Confident without swagger — the tone of a firm that already has the accounts.

THE MOTTO

Recruit & Conquer. Always an ampersand. Always uppercase at 0.23em tracking. Never re-typed by hand — use the files.

How the wordmark is built

Three decisions define it, and all three are load-bearing.

CLOSED, NOT SPACED

The words run together. Spaced, it reads as a description of a product. Closed, it reads as a name — and it matches the domain exactly, so anyone who sees it already knows where to go.

CAPITALS AT 132%

F, D and L are set a third larger than the lowercase. They replace the spaces as word separators and give the mark its rhythm.

WEIGHT COMPENSATED

Enlarging a capital in a high-contrast serif thickens its stems. The capitals are therefore drawn at a lighter weight (450) than the lowercase (600) so the strokes optically match.

That last point is why the wordmark cannot be reproduced by typing the name and scaling the capitals. It is a drawn artefact. Always place the supplied file.

Primary lockup

The wordmark with the motto ruled beneath it. This is the default signature and should be the first choice anywhere there is room for it.

FullDeskLeads

RECRUIT & CONQUER

Primary

Homepage, marketing, decks, letterhead, formal documents.

FullDeskLeads

RECRUIT & CONQUER

Primary, reversed

Green fields, dark headers, photography, apparel.

Wordmark

The motto removed. Use when the mark appears more than once on a surface, when the motto would fall below legible size, or in product interfaces where a motto reads as marketing intruding on a tool.

FullDeskLeads

Wordmark

Nav bars, app headers, repeat placements.

FullDeskLeads

Wordmark, reversed

Dark navigation, footers, merchandise.

Stacked lockup

For narrow and square placements where the horizontal lockup would have to shrink below its minimum — sidebars, tall banners, square advertising, apparel backs, signage.

Full
Desk
Leads

RECRUIT & CONQUER

Stacked

Narrow columns, square formats, print.

Full
Desk
Leads

RECRUIT & CONQUER

Stacked, reversed

Square social posts, apparel, signage.

Small-space marks

The wordmark cannot survive a 16-pixel square, so three reduced marks exist. Use the largest one that fits, and never invent a fourth.

Full
Desk
Leads

Stacked tile

Profile pictures, 400 px
and above.

FDL

FDL monogram

App icons and avatars,
48–400 px.

F

Letter mark

Favicon and browser tab,
16–48 px.

F

Letter, on light

Watermarks, stationery
detail.

The favicon letter is drawn heavier than the wordmark's capitals. A high-contrast serif loses its thin strokes below roughly 24 pixels, so the small cut is thickened to survive. This is deliberate, and the two files are not interchangeable.

Clear space and minimum sizes

Maintain clear space of 1x on all four sides, where x is the cap height of the F. Nothing enters that zone — no type, no rules, no photographic edges, no other logos.

FullDeskLeads

RECRUIT & CONQUER

FullDeskLeads

RECRUIT & CONQUER

200 px — primary minimum

FullDeskLeads

130 px — wordmark minimum

Full Desk Leads

RECRUIT & CONQUER

90 px — stacked minimum

Below 200 px wide, drop the motto and use the wordmark. Below 130 px, use the stacked lockup or a small-space mark.

Colour

Green carries the brand. Silver is structural only — it draws the motto rules and little else. Charcoal, not black, is the text colour.

Green

Primary. Wordmark, headings, key UI.

HEX #163E33
RGB 22 62 51
CMYK 82 45 68 42
PMS 560 C

Silver

Tagline rules, dividers, borders.

HEX #A7AFB2
RGB 167 175 178
CMYK 36 25 25 0
PMS 429 C

Charcoal

Body copy, high-contrast text.

HEX #1E2221
RGB 30 34 33
CMYK 72 62 64 62
PMS Black 6 C

Ivory

Page and surface background.

HEX #F8F8F5
RGB 248 248 245
CMYK 2 1 3 0
PMS 11-0601 TCX

White

Reversed wordmark on green.

HEX #FFFFFF
RGB 255 255 255
CMYK 0 0 0 0
PMS —

Pantone values are nearest matches for coated stock and should be proofed before a production run. Charcoal on ivory measures 13.9:1 and green on ivory 10.3:1 — both clear WCAG AAA. Silver on ivory does not pass and is never a text colour.

Typography

DISPLAY — PLAYFAIR DISPLAY

Forty conversations a week

RECRUIT & CONQUER

Weights 450, 500 and 600. Headlines, the wordmark, the motto, pull quotes. Never body copy.

TEXT — INTER

Interface and body

Inter carries everything functional: product UI, tables, buttons, forms, and long-form copy. Set body at 400 and interface labels at 500.

EYEBROW / LABEL STYLE

Uppercase Inter 500 at 0.14em tracking, for section labels and table headers.

Both families are licensed under the SIL Open Font License 1.1 and ship here as WOFF2, static TTF, and variable TTF. No fee, no seat limits, commercial use permitted. Licence texts are in **/fonts** and must travel with any redistribution.

Usage

DO

- ✓ Place the supplied files exactly as provided.
- ✓ Use the green mark on ivory, white, or very light neutrals.
- ✓ Use the white mark on green, charcoal, or a dark photographic area.
- ✓ Scale proportionally, always from a corner.
- ✓ Use the charcoal cut for one-colour print, engraving and fax.
- ✓ Keep the full clear space, even in cramped layouts.

DON'T

- ✗ Re-type the name and scale the capitals by hand.
- ✗ Re-space the words or insert gaps between them.
- ✗ Add gradients, bevels, glows, outlines or drop shadows.
- ✗ Recolour outside the five approved colourways.
- ✗ Stretch, condense, rotate or skew the mark.
- ✗ Add **.com** — the closed wordmark already is the domain.
- ✗ Add a symbol, icon or emblem alongside it.

File index

FOLDER	CONTENTS	USE
/logos	32 SVG masters, every lockup and colourway	Source of truth. Web, print, any resizing. Transparent by default.
/png	2400 px transparent PNG of every file, plus web cuts	Slides, documents, email, anywhere SVG is unsupported.
/favicon	ICO, SVG, 16–512 px PNG, Apple touch, maskable	Browser tabs, bookmarks, home screen, PWA.
/social	OG images, LinkedIn banner, two avatars, square post, email header	Profiles and link previews, pre-sized per platform.
/fonts	Playfair Display and Inter: WOFF2, TTF, variable, licences	Self-host. Do not hotlink a CDN copy.
/developer	tokens.css, tokens.json, head-snippet.html, site.webmanifest	Drop-in variables and markup for site and product.

Colourway suffixes. `-green`, `-white` and `-charcoal` are transparent-background. `-on-ivory` and `-on-green` carry a solid field, for placements that need one such as avatars and tiles.

For the build team

Import the tokens once and reference the variables rather than pasting hex values. Inline the SVG where it needs to inherit colour or animate; otherwise reference the file.

```
<link rel="stylesheet" href="/brand/developer/tokens.css">

.site-header { background: var(--fdl-ivory); }
.site-header h1 { font-family: var(--fdl-font-display); color: var(--fdl-green); }
.btn-primary { background: var(--fdl-green); color: var(--fdl-white);
                border-radius: var(--fdl-radius); font-family: var(--fdl-font-text); }
.divider { border-top: 1px solid var(--fdl-hairline); }
```

Every wordmark in this kit is converted to vector outlines. Nothing depends on a font being installed on the viewer's machine, and no text inside a logo file can be reflowed or substituted by a browser.
